Wonders of the Air (Wonders of Nature: Natural Phenomena in Science and Myth) By Tamra Andrews

This second book in a four-book series exploring the elements, *Wonders of Nature: Natural Phenomena in Science and Myth*, looks at the wonder of air from both a scientific and mythical perspective. Intended for teachers and librarians to use with students in intermediate and middle school grades, the book looks at natural phenomena that occurs in the air around us?such as rainbows, snow, tornadoes, lightning, and thunder?through ancient myth, and details the explanations of modern-day science. With this interdisciplinary approach, students will be encouraged to appreciate the magic in both myth and science, and to understand the commonality of human experience with nature over time. Each book contains eight myths, each from a different culture, and accompanying scientific explanation to use with students. Included are bibliographies; recommended Web sites; ideas for field trips, student projects, discussion, and activities; and illustrations and diagrams that will enhance student interest. Grades 4-8.

Editorial Review

Review

"Designed for grades 4-8, the text coordinates such simple physical principles as popping corn to illustrate the source of thunder and charting cloud types with facts drawn from websites. The choices of materials are sensitive to the limitations of elementary and middle school science labs and to the needs of beginning teachers....Recommended for middle school and public libraries and for the curriculum labs at teachers' colleges."-KLIATT
