Editorial Review

Review

From the reviews:

"The desire to create computer games attracts many young people to computing. This book meets the needs of this group of readers and students very well. It is also a fine introduction to the making of computer games for the experienced software developer who always wondered how games were made. ... There are excellent software development lessons that can be learned using this book ... the book provides a superb introduction to programming as well as to game construction." (Anthony J. Duben, ACM Computing Reviews, Vol. 49 (5), May, 2008)

About the Author

Jacob's career in the games industry spans fourteen years, but he has been programming games as an amateur and professional now for a quarter of a century. During this time he has worked on over a dozen published games for all the major console platforms, including as the lead programmer of the cult British game, Hogs of War. He has programmed, designed and project-managed titles for publishers like Gremlin, Infogrames, Atari, Disney and Konami and he truly knows the meaning of the word "crunch".

Somehow he also found time to study a Ph.D. in the psychology of learning and has a passion for most things that connect video games and learning (including a whole lot of research involving zombies: zombiedivision.co.uk). This passion also extends to teaching game development, which he practices in his position as Senior Lecturer in Game Development at Sheffield Hallam University in the UK.
