*From the Preface:*

"The purpose of this book is to present and apply a language and to discuss methods which make it very convenient to exploit such analogies, and which are uniquely suited to describe and explain non-equilibrium phenomena in a rich variety of many-particle systems: the language of time correlation functions and linear response theory."

### Editorial Review

#### From the Back Cover

The aim in writing up these lectures in book form has been to provide a unified, elementary and easily accessible account of the language of correlation functions or response functions, and to discuss particularly those simple techniques whose usefulness is not restricted to one specific system.

#### About the Author

**Dieter Forster** is a professor of physics at Temple University in Philadelphia. He was born in Southern Germany and received his “diplom” in physics at the University of Stuttgart in 1964, working under Hermann Haken. He then moved to Harvard University where he completed his Ph.D. in 1969 under Paul C. Martin. He has worked at Columbia University, the University of Chicago, and as a visiting professor, at the Technical University of Munich, the University of Stuttgart, and the National University of Mexico. He has taught physics courses on many levels but takes a special interest in conceptual level courses designed for students not entering the physics profession. His research has focused on the fluctuation theory of liquid structure and on phase transitions.
