A Guide to the Mammals of China From Brand: Princeton University Press

China's stunning diversity of natural habitats--from parched deserts to lush tropical forests--is home to more than 10 percent of the world's mammal species. *A Guide to the Mammals of China* is the most comprehensive guide to all 556 species of mammals found in China. It is the only single-volume reference of its kind to fully describe the physical characteristics, geographic distribution, natural history, and conservation status of every species. An up-to-date distribution map accompanies each species account, and color plates illustrate a majority of species. Written by a team of leading specialists, including Professor Wang Sung who provides a history of Chinese mammalogy, *A Guide to the Mammals of China* is the ideal reference for researchers and a delight for anyone interested in China's rich mammal fauna.

- The definitive, comprehensive, up-to-date guide to all of China's 556 mammal species
- High-quality color plates accompany the detailed text
- Each species account comes with a distribution map
- Organized taxonomically for easy reference
- Includes an extensive bibliography

Editorial Review

Review

"Now, for the first time, the natural history of all 556 of China's known mammals has been brought together in this impressive tome. This title represents a major achievement of international collaboration, and will be an invaluable tool in future research and conservation. It's also an important addition to any wildlife book collection."--**Kathryn Jeffs, BBC Wildlife Magazine**

"This volume, the labor of authors Hoffmann, Darrin Lunde, John MacKinnon, and Don E. Wilson and superb illustrator Federico Gemma, also benefits from the contributions of the two editors and Wang Sung and W. Chris Wozencraft. It is the most comprehensive single-volume reference to China's mammals and perhaps to those of Asia as well. . . . It is difficult to overestimate the usefulness of this outstanding book--not only for naturalists and mammalogists, but also for all conservation-minded people who are very concerned about the struggle for China's 1.3 billion people, with their often-disastrous culinary and pharmacological habits, and that country's precious wildlife."--**F.S. Szalay, Choice**

"Finally [China] now has a decent guide to the mammals. . . . The book has a great introductory section covering geography, the history of mammalogy in China, and conservation. This includes some useful maps and photographs. The text consists of the typical sections on characteristics, distribution, natural history, additional comments, and status. I was pleased to find this information is current and honest. . . . The artwork is by Federico Gemma of Italy and is top quality. . . . This is a much needed guide and it will be indispensable for naturalists and mammalogists for years to come."--**Roy John, Canadian Field Naturalist**

"[T]he Smith and Xie volume . . . will no doubt be adopted quickly as the gold standard by those working on Chinese mammals. . . . As a reference book, it should be on the shelf not only of practicing mammalogists and those with interest in China, but indeed of anyone with a passing interest in the mammalian fauna of this magnificent and complex country."--**Richard B. Harris, Journal of Mammalogy**

"[A] wonderful volume that will serve any field primatologist both as a guide to the area's monkeys and to help identify all those other strange non-primate mammals we glimpse through the binoculars from time to time."--**Adrian Barnett, Primate Eye**

From the Back Cover

"This is destined to be a landmark book on Asian mammals. Its publication marks a watershed event, enabling public understanding of a tenth of the world's mammal species. Contributors to the volume include many of the world's experts on Chinese mammals. This is an ambitious book."--**Bruce D. Patterson, Field Museum of Natural History**

About the Author

Andrew T. Smith is the Parents Association Professor of Life Sciences at Arizona State University. Yan Xie is associate research professor in the Institute of Zoology at the Chinese Academy of Sciences. Robert S. Hoffmann, now retired, was director of the Smithsonian Institution's National Museum of Natural History. Darrin Lunde is collections manager in the Department of Mammalogy at the American Museum of Natural History. John MacKinnon is a zoologist and writer whose many books include "A Field Guide to the Birds of

China". Don E. Wilson is curator of mammals at the National Museum of Natural History. W. Chris Wozencraft (1953-2007) was professor of biology at Bethel College. Federico Gemma, based in Rome, is a wildlife artist and freelance natural-history illustrator.

Users Review

From reader reviews:

Kurt Haney:

As people who live in often the modest era should be upgrade about what going on or facts even knowledge to make all of them keep up with the era and that is always change and advance. Some of you maybe will certainly update themselves by studying books. It is a good choice in your case but the problems coming to an individual is you don't know what kind you should start with. This A Guide to the Mammals of China is our recommendation to cause you to keep up with the world. Why, since this book serves what you want and wish in this era.

Beth Call:

Your reading sixth sense will not betray an individual, why because this A Guide to the Mammals of China e-book written by well-known writer whose to say well how to make book that could be understand by anyone who also read the book. Written with good manner for you, still dripping wet every ideas and creating skill only for eliminate your personal hunger then you still uncertainty A Guide to the Mammals of China as good book not just by the cover but also with the content. This is one publication that can break don't ascertain book by its handle, so do you still needing an additional sixth sense to pick this!? Oh come on your reading through sixth sense already said so why you have to listening to another sixth sense.

Elizabeth Johannes:

Is it anyone who having spare time subsequently spend it whole day by means of watching television programs or just laying on the bed? Do you need something new? This A Guide to the Mammals of China can be the answer, oh how comes? A book you know. You are thus out of date, spending your spare time by reading in this fresh era is common not a geek activity. So what these books have than the others?

Karen Ofarrell:

As a student exactly feel bored in order to reading. If their teacher inquired them to go to the library or to make summary for some e-book, they are complained. Just little students that has reading's heart or real their passion. They just do what the educator want, like asked to go to the library. They go to generally there but nothing reading really. Any students feel that reading is not important, boring as well as can't see colorful pics on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this A Guide to the Mammals of China can make you experience more interested to read.
