The New Cosmos: An Introduction to Astronomy and Astrophysics By Albrecht Unsöld, Bodo Baschek

Astronomy, astrophysics and space research have witnessed an explosive development over the last few decades. The new observational potential offered by space stations and the availability of powerful and highly specialized computers have revealed novel aspects of the fascinating realm of galaxies, quasars, stars and planets. The present completely revised 5th edition of **The New Cosmos** provides ample evidence of these dramatic developments. In a concise presentation, which assumes only a modest prior knowledge of mathematics and physics, the book gives a coherent introduction to the entire field of astronomy and astrophysics. At the same time it takes into account the art of observation and the fundamental ideas behind their interpretation. Like its predecessors, this edition of **The New Cosmos** will provide new insight and enjoyment not only to students and researchers in the fields of astronomy, physics and earth sciences, but also to a wide range of interested amateurs.

Editorial Review

Review

From the reviews of the fifth edition:

"... The library copies of the earlier editions are well thumbed, which is a good indication of how often they are referenced. I have no doubt that this new edition will prove as popular."

(Journal of the British Astronomical Association)

"The present volume remains, I believe, a valuable contribution to astronomy education, particularly because of its enormous breadth at a level of detail not really found elsewhere. For many an undergraduate course it should provide an ideal text, while for a wide range of other situations ... it will provide an excellent companion; even among the professional community, it will be a handy reference It is nicely produced and at a very reasonable price." (David Stickland, The Observatory, Vol. 122 (1167), 2002)

Language Notes

Text: English (translation)

Original Language: German

From the Back Cover

This new edition of the classic textbook The New Cosmos presents a comprehensive introductory survey of the whole field of astronomy and astrophysics.

Among the topics covered are:

- Classical astronomy and the Solar System
- Instruments and observational methods
- The Sun and the stars
- The Milky Way and other galaxies
- Cosmology
- The origin of the Solar System

- The evolution of the Earth and of life

The observational methods and results of astronomical research as well as their theoretical foundations and interrelations are presented in an understandable format. The rapid progress of observational techniques and of theoretical understanding in the past decade are introduced and summarized in this timely and readable volume.

This revised and extended new printing demonstrates the rapid advances in astronomical research and observation in the three years since the appearance of the 5th edition. The most important new results can be found within, providing in particular up-to-date information on our solar system, neutrino radiation from the Sun, the farthest galaxies and quasars and the development of the Universe.

Users Review

From reader reviews:

Stanley Roman:

The book The New Cosmos: An Introduction to Astronomy and Astrophysics gives you the sense of being enjoy for your spare time. You may use to make your capable much more increase. Book can to get your best friend when you getting stress or having big problem with your subject. If you can make reading through a book The New Cosmos: An Introduction to Astronomy and Astrophysics to be your habit, you can get a lot more advantages, like add your own capable, increase your knowledge about some or all subjects. It is possible to know everything if you like open up and read a e-book The New Cosmos: An Introduction to Astronomy and Astrophysics. Kinds of book are a lot of. It means that, science e-book or encyclopedia or some others. So , how do you think about this guide?

Theodore Parish:

Now a day people who Living in the era wherever everything reachable by connect to the internet and the resources included can be true or not need people to be aware of each facts they get. How people have to be smart in acquiring any information nowadays? Of course the answer then is reading a book. Reading a book can help individuals out of this uncertainty Information specially this The New Cosmos: An Introduction to Astronomy and Astrophysics book since this book offers you rich data and knowledge. Of course the data in this book hundred pct guarantees there is no doubt in it you may already know.

Bernard Taylor:

Reading a publication can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book consequently. There are a lot of reasons why people fantastic. First reading a publication will give you a lot of new info. When you read a e-book you will get new information mainly because book is one of various ways to share the information or even their idea. Second, reading a book will make you more imaginative. When you reading through a book especially fictional works book the author will bring that you imagine the story how the character types do it anything. Third, you could share your knowledge to other folks. When you read this The New Cosmos: An Introduction to Astronomy and Astrophysics, you can tells your family, friends along with soon about yours guide. Your knowledge can inspire others, make them reading a reserve.

Roberta Haile:

Reading a book make you to get more knowledge from it. You can take knowledge and information coming from a book. Book is published or printed or outlined from each source which filled update of news. With this modern era like at this point, many ways to get information are available for you actually. From media social including newspaper, magazines, science e-book, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Are you hip to spend your spare time to open your book? Or just seeking the The New Cosmos: An Introduction to Astronomy and Astrophysics when you required it?
